

# Computer Networks, Winter 2023

Instructor: Shashi Prabh

## Lab 0: C Refresher - I

This is a prelab where you will ensure that GCC is installed on your system and you can write, compile and execute programs written in C. *This lab is to be done individually.*

### 1 Hello World! - 70%

Write, compile and execute a simple C program that prints `Hello World!` on screen.

### 2 Input and output - 30%

Modify the previous code so that it asks the user to input his/her name and prints `Hello` followed by the input string.

### 3 Lab outcomes

1. The student must be able to create a file, modify the Hello World program to print some other string and be able to create an executable whose name specified.
2. The student must be able to write code where user input is asked and processed (a string printed on screen).
